

DAMIAN FILIPIAK

Junior IT Specialist

Junior IT Specialist with hands-on experience in maintaining local production and office infrastructure. On a daily basis I ensure the reliable operation of server systems and LAN/VLAN networks. My primary career goal is to work as a Network Engineer or in the Cybersecurity sector.

Experience

Junior IT Specialist Forvia S.A.

March 2025 – present

- Local IT infrastructure management, technical support for front and back-office environments.
- Network and server infrastructure monitoring (incl. Hydra system): continuous oversight of server, AP, and VM availability; rapid alert response (CRIT/DOWN states) and KPI verification via the Grafana platform.
- Virtual and server environment management: working with VMware vSphere clusters, physical hardware oversight via Lenovo XClarity, and execution of high-availability and failover procedures.
- LAN/VLAN maintenance and modernisation: migration of industrial switches (Cisco IE to Siemens Scalance with NAT rules) and physical network patching.
- Identity and access administration: account management in Active Directory (AD) and the SAP MII environment.
- Backup and data archiving management using the Commvault platform, including physical operation of tape libraries.

Education

B.ENG. OF COMPUTER SCIENCE

SPECIALISATION: CYBERSECURITY AND COMPUTER NETWORKS

Akademia Techniczno-Artystyczna dep. Wrocławska Akademia Biznesu

2022 – present

ZESPÓŁ SZKÓŁ POLITECHNICZNYCH "ENERGETYK" WAŁBRZYCH

IT Technician

2018 – 2022

Skills

Networks: Cisco IOS, Siemens Scalance, VLAN, NAT, DHCP, pfSense

Virtualisation: VMware vSphere, Lenovo XClarity

Systems: Windows Server, Active Directory, SAP MII

Monitoring: Grafana, Hydra

Backup: Commvault

Web: HTML, CSS, JS, React

Languages

Polish – native

English – intermediate (B1)

Projects

Homelab

- Virtualisation and network security: Designed an environment using a pfSense firewall. Implemented logical segmentation and isolation of the infrastructure (VLAN configuration, routing, VPN).
- Identity and access management: Active Directory administration. Implemented advanced resource management using roles (RBAC), Group Policy Objects (GPO), and the AGDLP model, ensuring a high security standard.
- Containerisation and service optimisation: Deployed the Docker platform and a lightweight Kubernetes cluster (k3s) to host own services.
- Monitoring and analytics: Deployed a Prometheus + Grafana stack to collect real-time metrics.
