

DAMIAN FILIPIAK

Cybersecurity & Network Engineer

IT Engineer with practical experience in maintaining local production and office infrastructure. On a daily basis, I ensure the smooth and reliable operation of server systems and LAN/VLAN networks. My primary career goal is to work as a Network or DevOps Engineer.

Experience

Junior IT Specialist

Forvia S.A Wałbrzych.
03.2025 - present

- Local IT infrastructure management and comprehensive technical support for front and back-office environments.
- Monitoring of network and server infrastructure (including the Hydra system): continuous oversight of server, AP, and VM availability; rapid response to alerts (CRIT/DOWN states) and verification of KPIs using the Grafana platform.
- Virtual and server environment management: working with VMware vSphere clusters, overseeing physical hardware via Lenovo XClarity, and executing high-availability and failover procedures.
- LAN/VLAN maintenance and modernization: migration of industrial switches (Cisco IE to Siemens Scalance with NAT rules) and physical network patching.
- Identity and access administration: account management in Active Directory (AD) and the SAP MII environment.
- Backup and data archiving management using the Commvault platform, including physical operation of tape libraries.

Education

B.Eng. in Computer Science.
Specialization: Cybersecurity
and Computer Networks.

Akademia Techniczno-Artystyczna
wydział Wroclawska Akademia
Biznesu
01.10.2022 - 06.07.2026

Skills

- Networks: Cisco IOS, Siemens Scalance, VLAN, NAT, DHCP, pfSense
- Virtualisation: VMware vSphere, Lenovo XClarity
- Systems: Windows Server, Active Directory, SAP MII
- Monitoring: Grafana, Hydra
- Backup: Commvault
- Web: HTML, CSS, JS, REACT

Languages

- Polish – native
- English – intermediate (B2)

Projects

Homelab

- Virtualisation and network security: Designed an environment using a pfSense firewall. Implemented logical segmentation and isolation of the infrastructure (VLAN configuration, routing, VPN).
- Identity and access management: Active Directory administration. Implemented advanced resource management using roles (RBAC), Group Policy Objects (GPO), and the AGDLP model, ensuring a high security standard.
- Containerisation and service optimisation: Deployed the Docker platform and a lightweight Kubernetes cluster (k3s) to host own services.
- Monitoring and analytics: Deployed a Prometheus + Grafana stack to collect real-time metrics.
